Education

Leiden University Sep 2025 – Current
Master of Science in Computer Science (Artificial Intelligence) *Leiden, Netherlands*
Current average grade: **8.23/10**

- Relevant Courses: Introduction to Deep Learning, Reinforcement Learning, Automated Machine Learning, Information Retrieval, Modern Game AI Algorithms

Shanghai Normal University Sep 2016 – Jun 2020
Bachelor of Science in Physics *Shanghai, China*

- Relevant Courses: Linear Algebra, Advanced Mathematics, Fundamentals of Computer Application, Probability Theory and Mathematical Statistics, Mathematical Physics

University of Helsinki Jan 2024 – Present
Post-University Education *Helsinki, Finland*

- Relevant Courses: Basis of Statistics and R, Elements of AI, AI in Society, Data Structures and Algorithms, Introduction to Databases, Functional Programming, Computing Tools for Computer Science Studies

Research Experience

Vertical Federal Learning in Advertisement Placement Feb 2023 – Mar 2024
MY AI Tech | Tools: Python, MySQL

- Sorted 10k ID-masked devices in MySQL to match the training sample with other parties.
- Performed feature engineering with Pandas to maximize the difference of platform-specific characteristics.
- Developed a multi-head Deep Neural Network with Keras for duo-task learning on partial features.
- Evaluated and optimized the scoring mechanism in personalized advertising based on appropriate metrics.

Image-Based Yield Classification of Pizza with YOLOv5 Sep 2022 – Feb 2023
MY AI Tech | Tools: Python, LabelMe

- Annotated 1.6k pizza images with 3 classes of yield quality in LabelMe.
- Augmented the whole dataset by cropping, rotating, adding noise, etc., using scikit-image.
- Applied transfer learning with the pre-trained YOLOv5 model, achieving over 97% classification accuracy.

Work Experience

MY AI Tech Jul 2022 – Apr 2024
AI Specialist, Marketing Intelligence Department *Shanghai, China*

- Collaborated with the Algorithm Team in deep-learning research.
- Trained XGBoost models in Python to identify potential users based on growing feature sets.
- Applied GBDT in Python to predict click-through rate with a mean absolute error of only 9%.
- Modeled unusual actions with Isolation Forest from scikit-learn to construct an automatic UEBA system.
- Updated models with new data quarterly and delivered visualizations to stakeholders using Power BI and Tableau.

Shanghai Cangxiong Technology Co., Ltd. Feb 2022 – May 2022
Data Scientist, Product Department *Shanghai, China*

- Automated multiple effect-metric analyses in Spark for the recommendation system.
- Trained an ALS model to perform item-based collaborative filtering with Spark ML.
- Implemented A/B tests using quantitative metrics on daily data in R, reducing churn rates by 13%.

Shanghai Haishilong Biotechnology Co., Ltd. Jan 2021 – Aug 2021
Data Scientist, Marketing Department *Shanghai, China*

- Preprocessed and performed feature engineering on user-related tabular data from 4 media platforms using Pandas.
- Applied K-means and t-SNE to cluster users across more than 100 features with scikit-learn.
- Targeted users dynamically with ad scheduling based on cluster characteristics.
- Tuned the model in feedback loops, eventually improving return on investment by 23%.
